

ROSCOR

The Industry's Leading Provider of Products
and Systems to Create and Deliver Electronic Media

Digital Video Editing & Shared Storage Solutions

Roscor has been a leader in the field of electronic media communications since the days of analog video tape. Along the way, we have been influential in the introduction and evolution of computer based audio/video tape editing, component and composite video editing, digital composite and component based production and post production, digital non-linear editing, digital desktop production, effects and compositing and digital audio post production.

More recently, Roscor has been a pioneer in the design, sale and integration of facility class media networks optimized to support the collaborative works of editors and artists, using various digital content creation tools, regardless of platform (Macintosh, Windows, SGI-IRIX). These media networks give our customers the ability to take control of their workflow. Digital content creation tools are linked via high speed networks to allow access to shared media assets. This shared media asset storage concept offers a flexible and secure way to manage your content, as well as unmatched expendability and scalability. Roscor can design the right facility class media network which will connect your non-linear and digital media production tools, allow you to share and protect your media assets, enable facility-wide management and grow as your requirements change.

Complete the puzzle with Roscor. We have the experience and resources to provide a comprehensive solution. Roscor is your source for non-linear editing systems which range from low cost DV based systems to 24P High Definition based systems. Our manufacturer certified product specialists will demonstrate each solution as well as provide the best operational training and after sales support in the industry. In addition, Roscor can provide a complete integrated set of software solutions which will leverage the investment you made in your media assets. These turnkey asset management solutions can offer the ability to find, sort and retrieve critical media when you need it, as well as transfer media files between desktops or between cities. Once located, this media can be repurposed in another program. The file can be transferred to another production tool within your facility, across town or across the country.

Roscor can provide a complete solution for most requirements. We can help you select the best system for the type of work you want to create. Whether your project requires DV based compatibility, uncompressed digital 601 or High Definition 24P, we can offer a comprehensive solution. A solution that includes all the necessary monitors, decks, network equipment, peripheral software and hardware components that will meet your performance demands, and of course, a package that fits your price range. Because Roscor sells and services the entire spectrum of video and audio hardware, as well as computer networking equipment, we can be your one-stop shop and single source contact for all your non-linear and media

networking requirements. Roscor stocks storage systems and other peripherals for fast delivery and instant support. We have multiple demonstration systems, along with manufacturer trained and industry proven specialists available for quick product demonstrations and proof of concept trials.

The bottom line. We understand that buying or upgrading to a digital editing and media networking solution can be a major investment. It's important that the system you invest in today works for your immediate needs, but won't constrain your opportunity for growth and expansion in the future. Roscor's real world experience enables us to recommend the best price performance solution with the bottom line in mind.

THE RIGHT SOLUTION FOR YOUR APPLICATION

Commercial Post Production

- Standard Definition Non-linear Editing
- High Definition Non-linear Editing
- Mission Critical Shared Storage Solutions
- Digital Asset Management Systems
- Streaming Media Solutions

Corporate Production

- Standard Definition Non-linear Editing
- DV Based Non-linear Editing
- Streaming Media Solutions
- Digital Asset Management
