

Autodesk Cleaner XL

Make sure your encoded media looks its best with Autodesk® Cleaner® XL 1.5 software for the Microsoft® Windows® platform. High-quality filters and total control of the industry's leading encoders let you create stunning Windows Media® and QuickTime® video. Use MPEG-4 and Kinoma® technology to master video for handheld PDAs and cell phones. Easily integrate Cleaner XL 1.5 into your existing facility workflow with powerful workflow features such as watch folders, stream publishing, and command line scripting.

Master your digital media. Experience the high-quality encoding, flexible workflow, productivity, and speed of Autodesk® Cleaner® XL 1.5 software. Whether you're producing entertainment, corporate communications, e-learning, advertisements, or proposals, you can rely on Cleaner XL 1.5 to help your media look and sound its best.

Performance

Work faster and get the most out of your hardware with Autodesk Cleaner XL 1.5 — optimized for multiple processors, Intel Hyper-Threading, and intelligent color-space conversion.

Quality

Achieve the best audio and video quality on the desktop and maximize the impact of your media. Intelligent color space conversions, native YUV processing, a complete selection of editable filters, and ready-to-use profiles let you optimize the quality for each output format. Cleaner XL 1.5 includes a complete set of professional audio filters with a 6-band parametric equalizer and compressor/limiter so your media can sound as good as it looks.

Flexibility

Reach the widest audience. Deliver your media in a variety of formats, sizes, and bit rates. Create all the latest formats with Cleaner XL 1.5, including Windows Media® 10, QuickTime®, MPEG (1, 2 & 4), RealVideo®, Kinoma® for Palm® OS based PDAs, DivX®, and many others.

Productivity

Get more work done in less time. Cleaner XL 1.5 software streamlines workflow. Each job can create multiple outputs with varying sizes and bit rates, and then deliver each of those outputs to multiple destinations. Reuse and share almost every part of a job, from output profiles to filter presets. Integrated Autodesk® Backburner® functionality and the Cleaner XL 1.5 job queue let you process media in the background while you're preparing other jobs.

Integration

Cleaner XL 1.5 software accepts almost any source format, making your existing media creation tools even more valuable and flexible when coupled with Cleaner XL 1.5. Easily integrate Cleaner XL 1.5 into your workflow using watch folders, stream publishing, and command line driven interface.

Automation

Using the new command line interface and support for Backburner, users can now build scripts and automate encoding jobs as part of their daily processes.

Macintosh user?

Find out more about Autodesk® Cleaner® 6.5 software for Mac OS® X

Features Build scripts and automate encoding jobs. Import images with a bit depth higher than 8 bits. Define presets to reflect changes and updates to preferred output formats. Autodesk Cleaner XL 1.5 software for Microsoft® Windows® lets you create stunningly mastered video.

Key New Features in Cleaner XL 1.5

New Format Support

- Input formats: DPX, Cineon®, OpenEXR®;
- Output formats: DivX® 5.2, FLV & SWF (Flash® video exporter)

- Real® 10 for RealVideo® and RealAudio®
- Support for QuickTime® 7 including support for H.264
- MPEG-2: Support for 4:2:2 and two-pass variable bit rate encoding
- Kinoma® v3 exporter for the latest PDA handheld devices

- LUT support allows Cleaner XL 1.5 to import images with a bit depth higher than 8-bits.
- Scriptable: Using the new command line interface and support for Autodesk® Backburner®, users can now build scripts and automate encoding jobs as part of their daily processes.
- Pre-sets have been added to reflect changes and updates in preferred output formats.
- Interoperability with Autodesk products such as Discreet® Smoke® and Discreet® Flame® effects systems software is enabled via Wiretap support. Users can now read clips (video and audio) stored on Autodesk® Stone® file system, meaning that no intermediate renders are needed.
